

**IN THE UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF TEXAS
WACO DIVISION**

NCS MULTISTAGE INC.,
NCS MULTISTAGE, LLC,

Plaintiffs,

v.

NINE ENERGY SERVICE, INC.,

Defendant.

CIVIL ACTION NO. 6:20-CV-00277-ADA

JURY TRIAL DEMANDED

**DEFENDANT NINE ENERGY SERVICE, INC.'S
FINAL INVALIDITY CONTENTIONS**

Pursuant to the Court's Order Governing Proceedings (Dkt. 20) and the Scheduling Order (Dkt. 25), Defendant Nine Energy Service, Inc. ("Nine") provides the following Final Invalidity Contentions to Plaintiffs NCS Multistage, Inc. and NCS Multistage, LLC (collectively, "NCS"):

I. Final Invalidity Contentions

Nine provides the following disclosure of its Final Invalidity Contentions. In compiling these contentions, Nine has relied in part on NCS's First Supplemental Preliminary Infringement Contentions dated October 20, 2020. In the event that NCS's Final Infringement Contentions identify patent claims not asserted in NCS's First Supplemental Preliminary Infringement Contentions, Nine reserves the right to supplement these Final Invalidity Contentions and seek relief from the Court.

Further, in its infringement contentions, NCS appears to assign overly broad claim constructions in an effort to assert infringement where none exists, and to accuse a product that does not infringe the asserted claims. Nine's Final Invalidity Contentions take into account NCS's apparent constructions and may reflect aspects of the prior art that satisfy those constructions.

Defendant Nine Energy Service, Inc.'s Final Invalidity Contentions

Nine's assertion that a particular limitation is disclosed by a prior art reference, however, is not an admission that NCS's apparent claim interpretations are supportable or proper, or that the claim limitations in question are definite or otherwise amenable to construction.

Discovery remains ongoing, and Nine reserves the right to seek leave from the Court to amend these contentions in view of new information discovered after the Final Invalidity Contentions are served, including information received from third parties relating to the identified prior art.

A. Chart Identifying Where In Each Prior Art Reference Each Element is Taught

Nine provides Exhibit A, which is a chart setting forth where in each identified prior art reference each element of the asserted claim(s) is found.

B. Identification of Indefinite and Unsupported Claim Terms

Nine identifies the following claim terms as indefinite or unsupported by the written description under Section 112:

- “rupturing force” (all claims) – This limitation is indefinite and lacks written description support under Section 112.
- a “region of the tubular member where the rupture disc is attached . . . is parallel to the internal diameter of the casing string” (all claims) – This limitation is indefinite and lacks written description support under Section 112.
- “a rupturing force greater than the rupture burst pressure” (Claims 14-15, 22-25, 27, 29, and 56) – This limitation is indefinite and lacks written description support under § 112.
- “specific gravity . . . of the well fluid” (Claims 22-25, 27, 37-41, 50-53, and 55-57) – This limitation is indefinite and lacks written description support under Section 112.

Defendant Nine Energy Service, Inc.’s Final Invalidity Contentions

- “rupture disc is configured to disengage from sealing engagement when exposed to a pressure greater than a hydraulic pressure in the casing string” (Claims 28-29, 36-43, 46, 50-53, and 55-57) – This limitation is indefinite and lacks written description support under Section 112.

C. Identification of Claims Directed to Ineligible Subject Matter Under Section 101

Nine no longer contends that any of the asserted claims are directed to ineligible subject matter under Section 101.

Defendant Nine Energy Service, Inc.'s Final Invalidity Contentions

Dated: March 18, 2021

Respectfully submitted,

/s/ Jeffrey T. Han

EXHIBIT A

EXHIBIT A
FINAL INVALIDITY CONTENTIONS – CHART OF PRIOR ART

Pursuant to the Court’s scheduling order (Dkt. 25), Defendant Nine Energy Service, Inc. (“Nine”) hereby provides the below chart setting forth where in each of the identified prior art references that each element of claims asserted by Plaintiffs NCS Multistage, Inc. and NCS Multistage, LLC (collectively, “NCS”) are found. The chart below addresses asserted claims 14-15, 22-25, 27-29, 36-43, 46, 50-53, and 55-57 of U.S. Patent 10,465,445, including any independent claims from which the asserted claims depend.

In compiling these contentions, Nine has relied in part on NCS’s First Supplemental Preliminary Infringement Contentions dated October 20, 2020. In those contentions, NCS appears to assign overly broad claim constructions in an effort to assert infringement where none exists, and to accuse a product that does not infringe the asserted claims. Nine’s Invalidity Contentions take into account NCS’s apparent constructions and may reflect aspects of the prior art that satisfy those constructions. Nine’s assertion that a particular limitation is disclosed by a prior art reference, however, is not an admission that NCS’s apparent claim interpretations are supportable or proper or that the claim limitations in question are definite or otherwise amenable to construction. Moreover, Nine may seek to amend these invalidity contentions to account for any new interpretation or applications of the asserted claims, for example, if NCS changes its infringement theories or the Court issues an amended claim construction order.

Nine respectfully submits that each and every one of the asserted claims is invalid as anticipated or obvious in view of one or more of the following prior art references.

50.0	A method for installing casing in a wellbore containing a well fluid and having an upper vertical portion, a lower horizontal portion, and a bend portion connecting the upper and lower portions, the method comprising:	<i>See</i> Limitation 22.0.
50.1.a	running a casing string into the wellbore, the casing string having an internal diameter that defines a fluid passageway between an upper portion of the casing string and a lower portion of the casing string,	<i>See</i> Limitation 22.1.a.
50.1.b	the upper and lower portions of the casing string separated by a chamber sealed on one end by a rupture disc assembly and on an opposing end by a seal, the chamber containing a first fluid having a first specific gravity	<i>See</i> Limitation 22.1.b.
50.2.a	wherein the rupture disc assembly comprises (i) a tubular member having an upper end and a lower end, the upper and lower ends connected in-line with the casing string and	<i>See</i> Limitation 1.1.
50.2.b	(ii) a rupture disc having a rupture burst pressure and in sealing engagement with a	<i>See</i> Limitation 1.2.

#	Claim Language	Citations to Prior Art
	region of the tubular member within the upper and lower ends,	
50.3.a	wherein the rupture disc is configured to disengage from sealing engagement when exposed to a pressure greater than a hydraulic pressure in the casing string after the casing string has been positioned in the wellbore and	<i>See</i> Limitation 28.2.a.
50.3.b	the region of the tubular member where the rupture disc is attached has a larger internal diameter than the internal diameter of the casing string and is parallel to the internal diameter of the casing string; and	<i>See</i> Limitation 1.4
50.4	floating at least a portion of the casing string containing the sealed chamber in the well fluid in the lower horizontal portion of the wellbore.	<i>See</i> Limitation 22.3.
51.	The method recited in claim 50 further comprising: filling the casing string above the rupture disc assembly with a second fluid having a second specific gravity higher than the first specific gravity.	<i>See</i> Limitation 23.
52.	The method recited in claim 51 wherein the first specific gravity is less than a specific gravity of the well fluid.	<i>See</i> Limitation 24.
53.	The method recited in claim 51 wherein the first fluid is air.	<i>See</i> Limitation 25.
55.	The method recited in claim 50 further comprising applying a pressure within the casing string greater than the hydraulic pressure in the casing string to disengage the rupture disc from sealing engagement	Al-Anazi, at Abstract, Figs. 1-4, 1:6-8; 1:12-19; 1:36-54; 1:58-64; 2:3-22; 2:28-34; 2:46-63; 3:3-9; 3:17-4:63; 5:3-7:40.
